

CENTRES FOR HARDWARE ASSEMBLY

Control station for shutters, including a reading and cutting system for glazing beads

FB 200 is a functional, versatile and practical solution for hardware assembly.

This machine allows to carry out the following operations:

1. Handle hole with vertical-frontal positioning of the shutter (hydraulic feed of the drilling unit)
2. Reading and cutting system for espagnolettes and scissors (hydraulic shears)
3. Hardware screwing through servo-powered electric screwdriver
4. Hardware reading and cutting system for blinds and shutters
5. Hardware assembly on wickets or already glazed shutters.

Detail of the execution of the handle hole

Activation with pre-alignment to the hole.

External blocking of the shutter

Extendible and reclining working table
